The cameras themselves are identical apart from the front fascia, according to the parts lists. The Canon model number on the bottom is consistent between marketing names. Images are recorded as JPEGs. Raw image files are not accessible without the use of third party firmware such as CHDK. Canon issued a recall in October 2006 adding these to their recall list. The damaged CCD displays purple or blueish, distorted or possibly no image at all. This problem can be temporarily overcome by removing both the main battery as well as the small internal battery. Canon has acknowledged this issue and formerly repaired free of charge. Inheriting the classic IXUS design, the Canon 95 IS key features include a 3x zoom lens with Optical Image Stabilization, a 2.5 inch LCD screen, DIGIC 4 processor, new Smart AUTO mode, and AntiBlur and Face Detection technologies.

In fact its front plate is identical to the 80 IS, with a resolution hike from 8 megapixels to ten the most obvious change. That said, the optical viewfinder is so small and murky most wont bother with it. The IXUS 80 IS was shipped last year with a 32MB SD card in the UK. OK, thats paltry by todays 32GB SDHC standards, but at least it meant users were up and shooting after unloading the camera from the box and charging up the battery. Annoyingly, but not unexpectedly, the full manual is only included on CD ROM, with a heavily abbreviated quick start guide the only hard copy provided. Canon states these are silver, pink, grey, blue or pink, though our not unattractive review sample

appeared to fall halfway between the latter two. Canon suggests that this analyses any given scene or subject in detail, checking subject brightness, contrast, distance from the lens plus hue, and then selects the most fitting of 18 possible modes to ensure optimum results. With the camera thus enabled, all the user truly has to do is point and shoot. Rechargeable lithium ion battery life is good for a so-so 260 shots per charge. Nothing spectacular here then, but given its price point, build quality, and intended audience, not much to grumble about either. Again, adequate, but falling short of what else is out there. In the Canon range, look to the recently Photography Blog rated IXUS 100 IS if HD movies and HDTV connectivity are a must have. A press of the power button and the IXUS is up and running in just over a second, the lens rapidly extending to maximum wideangle setting while the rear screen bursts into life to the sound of an identlike flourish. If shooting in program mode its lightning fast to determine focus, with the scene and setting determining auto mode a mere fraction slower. Likewise, any shutter delay is imperceptible as you go on to take the shot.

Maximum resolution JPEGs are committed to memory in a blink of an eye, the rear screen blanking out momentarily as this happens. Incidentally, if you do select auto mode, be prepared to put up with a low mechanical buzz as the camera continually adjusts its settings so you don't miss a trick. Though this is also responsive, the transition through the focal range is soundtracked by the whirr and buzz of its internal mechanics. In playback the zoom can be used to check focus when steered towards its telephoto setting, or display previously captured images as a group of nine thumbnails if directed to maximum wideangle. Unsurprisingly the 2.5 inch LCD dominates by taking up two thirds of the back plate, with optical viewfinder window directly above, alongside a pairing of function indicator lights. The LCD provides adequate visibility when shooting indoors, although bright sunlight unsurprisingly results in the need to cup a hand around the screen and squint. Thus it fares rather better when shooting indoors. These comprise an indented slider switch of plastic construction with a raised ridge that just catches the thumb. All three are illustrated with self-explanatory icons. Should you own one of Canon's portable Selphy printers you can still access print settings and earmark images for printing via the playback menu itself, so the lack of a one-touch control isn't really missed. In auto capture mode users are limited to being able to manually tweak the size and quality of images, or opt to shoot in widescreen ratio. Flick the slider switch one setting down to program mode however and the user can, starting at the top, additionally access the camera's 15 pre-optimised scene modes that include an ISO 3200 equivalent setting with attendant resolution drop to 1600x1200 pixels plus underwater and aquarium options alongside the familiar portrait, night snapshot settings.

Whichever of these options you choose then appears illuminated top left of screen, situated on the vertical axis of the toolbar. Pressing this brings up a set of two folders on screen; one governing additional shooting settings, the other providing fairly generic set up options. Among the more common settings, the shooting options let you bias the AF frame toward face detection which appears also to be its default setting, switch on the point AF function which zeroes in on a face before you press the shutter button fully, and choose from a range of image stabilisation modes; from continuous to shoot only to panning to off. Such features appear identical to those previously found on the IXUS 80 IS. So to reiterate, there are very few grumbles here. Use is intuitive, the Canon Digital IXUS 95 IS proves fast to respond, and arguably that's all any of us really want from a pocket-sized point and shoot. Apart from that is from razor sharp, richly coloured and finely detailed images. So can the IXUS 95 IS also prove its mettle as the perfect travel companion when it comes to that part of the equation. And despite a wobble last year when they were knocked off by Sony, the Ixus 95 sees Canon regain its crown.

It's clearly been focusing more on the design and usability of the Ixus instead of just stuffing in more megapixels. Build quality is lovely, with a solid but satinslinky feel in the hand. It's supercompact too, giving the ultrasmall Ixus 100 a good run for its money with a thickness of just 22mm along with creditcard-sized width and height. Power it on and it's usually ready to take the shot before you are, with a startup time of about 1.5 seconds. The lens gives you a 35mm equivalent wideangle field of view, which isn't as impressive as some others here but actually looks a little wider than the spec suggests. Elsewhere, Canon has stolen a march on the featurestuffing merchants by adding one that's actually useful. In fullauto mode, you don't need explicitly to set the camera to macro mode to take a closeup shot. Simply bring it up close to your subject and the onscreen mode indicator flips over to the macro icon in grininducing fashion. Point it elsewhere and, after a second or two, it flips back to standard mode. Lowlight performance is the fourthbest in the group, with ISO 1600 shots that we'd class as good for webservice use; if you print the results at A4, the graininess and detail lost to noise reduction will disappoint. Take indoor shots with flash, though, and the flattering colour balance means friends in the pub will appear 10% betterlooking than they really are. And there's nothing wrong with that in our book. It all adds up to another winning performance; this is clearly the best compact camera around for under 200. Den Namen IXUS führte das japanische Unternehmen Canon 1996 als Bezeichnung ihrer APS-Kompaktkameras ein. Seit 2000 findet diese Bezeichnung als Canon Digital IXUS auch für eine Modellreihe von sehr kompakten Digitalkameras Verwendung. In den USA und Kanada werden diese IXUS-Modelle unter den Bezeichnungen Elph APS bzw. PowerShot Digital Elph digital, in Japan unter. Gordon's In Camera book. Rent gear from Borrow Lenses Announced in February 2009, the Canon Digital IXUS 95, also known as the PowerShot SD1200 IS Digital ELPH in North America, is a 10 Megapixel compact with a 3x image stabilised optical zoom, 2.5in LCD display and an optical viewfinder. It replaces the Digital IXUS 80 PowerShot SD1100 IS, adding extra resolution and Canon's new scene recognition technology. Since launch it's become one of the bestselling compacts of 2009, and in our review we'll find out if it lives up to its popularity. Depending on your region, it's also available in a wide choice of colours dark grey, blue, pink, green, light grey or orange, and if you'd really like to make a splash, the optional WPDC29 underwater housing will protect the camera to depths of 40m. The 3x zoom lens retracts completely when the camera isn't in use, producing a softenedged lustrous brick. Though you wouldn't think this an especially ergonomic shape, it's surprisingly comfortable to grip either with one hand or two.

The LCD panel is bright and punchy, and Canon's even squeezed in an optical viewfinder, though it's so tiny we can't see many people wanting to use it other than in an emergency, when battery power is very low for example. The rear panel controls are finished in grey plastic, a look that's slightly at odds with the overall design, nowhere more so than the mode selector switch, a three-position plastic lug that doesn't look very elegant, but at least provides a simple means of switching record modes. The mode switch has three positions, Auto, Program plus scene modes, and Movie. The Playback mode has been moved to a separate button and the direct print button has been dropped from this model. A button at the bottom of the rear panel toggles display overlays and, because of the presence of an optical viewfinder, can also be used to turn the display off, resulting in greatly increased battery life. Finally the menu button activates the full capture and playback tabbed menu

system, depending on which mode you're in. The builtin flash sits on the top left corner of the front panel and has a quoted maximum range of 4.2 metres at the wide angle setting. In Program mode you can force it on or off or have it activate automatically when conditions demand. There's also a slowsynchro mode for creative effects in low light. Within the specified range, the flash produced excellent results with only slight fall off in illumination at the frame edges. In very dark conditions, such as at night or in dimly lit rooms, the flash could result in redden, even with the redden lamp in use, so you'll almost certainly want to make use of the redden correction option in these situations. Support this site by shopping at Amazon Let's speak plainly and say that's not going to set anyone's heart racing. It's neither a super wide angle nor a super telephoto, and is about the minimum coverage you'd expect from a zoom lens of any description.

Having said that it provides what you'll need for taking most kinds of photos from small group shots to portraits and will allow you to nicely frame your shot without having to walk back and forth too much. On powerup the lens extends in two sections by about 20mm and the camera is ready to shoot in less than a second. In macro mode you can focus as close as 3cm, not as close as some Canon compacts, but better than most of the competition. The zoom covers the total distance smoothly and rapidly endtoend it takes about a second and you can jog it through six discrete steps with a nudge on the zoom rocker. It's nice and quiet too. See the Blurring Action tutorial at our sister site DSLR Tips for an example of this. When you press the shutter button halfway, up to nine green frames appear on those faces on which the camera maintains focus. All recent Canon Compacts make use of the DIGIC 4 processor's face detection and it works very well in nearly all circumstances. In good light it's quick to locate faces and sticks with them even when they are turned almost to full profile. Indoors it's a little less efficient, but still workable. When faces aren't detected the camera defaults to a ninearea AF grid system. You can also select Centre AF focussing which uses a single central frame as the focus area. The central frame can be set to one of two sizes for more precise focus selection and the focus can be locked by pressing the right macro button on the control disc. It's clear, bright and contrasty and makes for comfortable viewing in all conditions bar bright sunlight. The brightness is adjustable but, as with all LCD screens, if you can't see it on the default setting, increasing the brightness won't help much. It's so small that using it is a bit of an effort and in most situations you'll be better off with the screen which is more accurate. But for shooting in bright sunshine or when you want to conserve the battery it provides a useful alternative.

The first of these provides access to shooting settings including digital zoom, flash, AFassist beam, display overlays, and date stamp. The second accesses less commonly used camera settings like speaker volume, LCD brightness, file numbering options, auto rotate, date and time setup and power saving options. This is also where you go to format SD cards. In Auto mode all you can do from the Func menu is change the image size. The other options, including ISO, white balance, colour modes, metering modes and continuous shooting, are greyed out and only appear in Program mode. One with slideshow and basic image editing tools such as iContrast dynamic range enhancement, redden reduction and resizing, and another with direct print options. The Func button has no function in playback mode, but the Display button toggles several overlays. The first of these is blank so you can view the unadorned image. Next is a simple information overlay including file number, date and time and image size. Pressing display again reduces the image preview to a thumbnail and displays a histogram along with a detailed information display including exposure settings. This view also flashes areas that have clipped highlights. It determines whether there are people in the scene, whether it includes blue skies, whether the subject is backlit, how close the subject is and whether it's day or night. An icon appears in the top left of the screen to tell you what that camera thinks it's looking at. This is quite an advance on conventional auto exposure and works very well in most circumstances though it can be fooled by large areas of colour, and results in much better results, particularly for backlit and night shots. For situations where Auto mode isn't providing the results you want, or if you simply want a little more control, Program mode provides access to ISO white

balance, colour presets, metering modes and continuous shooting.

You sadly can't use the optical zoom whilst recording a movie, but a 4x digital zoom is available. With a starting size of 640 x 480 pixels, the quality of 4x digitally zoomed footage leaves a lot to be desired though. In the meantime, registered members of Vimeo can download the original file for the clip seen here at the following page for further evaluation if desired.
